DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claim 1 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Brehob et al. (US/6,098,585).

3. Brehob et al. discloses a method/system of starting an internal combustion engine comprising: setting a target kinetic energy as being a kinetic energy required for starting the internal combustion engine; and supplying a starting energy controlled in accordance with the target kinetic energy to the internal combustion engine from a combustion within the cylinder is obtained based on a physical value representing a state of an air/fuel mixture within the cylinder of the internal combustion engine, and the

Art Unit: 3747

kinetic energy to be is estimated based on the obtained combustion energy. Col 3 line 65-col. 4, line 40.

4. Claims 1, 9 are rejected under 35 U.S.C. 102(e) as being anticipated by Haghogooie et al. (US/6,357,409.

5. Haghogooie et al. discloses a method of starting an internal combustion engine comprising: setting a target kinetic energy (Target RPM) as being a kinetic energy required for starting the internal combustion engine; and supplying a starting energy controlled in accordance with the target kinetic energy to the internal combustion engine from a predetermined starting energy supply source e.g. the engine starter.

Allowable Subject Matter

6. Claims 2-8, 11-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. Claims 17-20 are allowed.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The art are various starting systems that start engine by combustion energy or rotate engine before starting.
